# RAF Vue™

Get Visibility. Optimize Workflow. Improve RAF scores.

Ensuring that chronic health conditions are appropriately documented every year can have a significant impact on reimbursement. Lack of tools and reliance on manual processes make addressing this opportunity a challenge. That's where RAF Vue comes to the fore. RAF Vue automatically analyzes your patient claims to identify your risk based population, generates accurate RAF scores, and enables a workflow to capture relevant chronic conditions and provides transparency among departments and key stakeholders.
3,500 patients

48,000 records

Calculating RAF Vue Impact

In an operating environment where every 0.1 increase in RAF score generates **$1M in revenue per 1000 patients**, RAF Vue generates rapid results for healthcare systems. Typical real-world results include:

In a recent client implementation, we imported **48,000** records and identified a risk-adjusted population of approximately **3,500** patients and quantified the following:

An HCC recapture rate of only **39%** vs. the industry goal of **85%**

39% recapture rate

goal 85%

$24M

Over **$24** million dollars in financial opportunity simply from not recapturing chronic codes

Identified **1,200** patients lost from last year to this year

RAF Vue At-A-Glance

- Instant insights into chronic code capture and recapture opportunities

- Quickly surface patients with the greatest treatment and financial impacts through a centralized, patient-level view

- Automatically calculate reported and potential RAF scores

- Generates reporting at the patient, provider, and reviewer level

- Achieve immediate go-live without EMR integration

Identified over **500** patients that have not had an annual wellness visit this year

RAF Vue identified these insights and enabled immediate action to capture the upside opportunity.
